

## Oakland Wildflower Farm

is a "Grower and Educator" of Michigan native plants. We grow wildflowers, grasses, sedges, and shrubs to match a variety of habitats. We strongly believe that native plants play a key role in improving water quality, enhancing our landscape and reducing our human obsession with fertilizer, pesticides and lawn mowing. Native plants are absolutely essential for attracting our native insects who pollinate our flowers and food crops as well as provide the basis for our biodiversity, food web and in the end, our survival.

### Great News!!

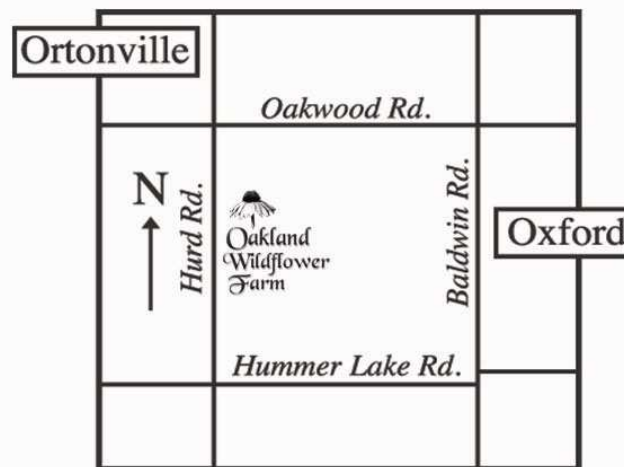

We are pleased to announce the affiliation with Mary Ann Menck, owner of *Mary Ann's Michigan Trees and Shrubs*. We will be offering a selection of her most popular native tree and shrub species. If you are looking for something in particular, consult her website, [www.maryannstrees.com](http://www.maryannstrees.com) then give us a call!
